**CHARTER FORMAT**

**Chief Complaint:** This is what the patient tells you - his/her description of the problem. For e.g. "I can't breathe", "my chest hurts"

**History:** This is the patient's immediate history and/or events leading up to the current incident. It also includes the patient's pertinent past medical history. e.g. "patient was watching TV when chest pain began"; patient accidentally shot a nail from a nail gun into his knee"; pt found unresponsive on couch for unknown reason"

**Assessment:** This is the record of your physical assessment of the patient including the primary and secondary exams. Focus on key findings; pertinent positive and negative findings that justify your treatment. You should use a logical approach starting with how you found the patient on arrival, a summary of your primary findings (AVPU, A,B,C's) ; then relevant complaints as you do your physical exam (head to toe or modified). Describe your findings in a head-to-toe order.

**Treatment:** Treatment performed by you or your partners.

**Transport:** Mode of transport, any other treatment performed during transport, any changes in patient's status and disposition of patient upon arrival at the emergency department.

**Extra:** Anything that does not fit in any of the other categories. e.g. disposition of pt. belongings
